**THREADED ROD ANCHORS**

## **Sammy X-Press: A Versatile Solution for Overhead Applications**

When the Boston South Station Tower began to develop a 51-story tower atop one of the busiest rail hubs in New England, there was bound to be numerous opportunities for innovation to be added into the workflow that required tight deadlines and efficient work schedules. And that's exactly where Sammy X-Press anchors came into play.

The introduction of Sammys anchors began with Carlyle Engineering, a fire protection contractor that was working on the parking garage portion of the tower. When introduced to Sammy X-Press anchors, Carlyle Engineering immediately saw the value in bringing them to the job because of the ease and speed of installation, along with solving unique problems.

"One of the reasons the X-Press anchors worked so well is because they have superb design flexibility," says Paul Hrenko of Carlyle Engineering.

Contractors have long trusted the dependability, effectiveness and convenience of Sammy X-Press – even in challenging conditions. The threaded rod hanging fasteners are a revolutionary product, particularly for awkward and tight spaces. In addition to installing into a variety of steel thicknesses up to 1/8”, the fasteners can accommodate vertical, horizontal, and swivel installations at an angle of up to 89 degrees.

“We needed to access the back of the metal deck, and the only product that would work in an efficient manner is the Sammy X-Press,” Hrenko says. “Using Sammy X-Press was a no-brainer, especially because of how quick and easy they install. We were able to shave days off the install time.”

## Mechanical and Electrical Contractors Get on Board

As the trades talked on the jobsite, a mechanical contractor was running into issues hanging HVAC ductwork from the metal deck. In the past, the contractor relied on DeWalt Bang-It® anchors for similar projects, but the contractor discovered that Sammy X-Press was the only solution for South Station Tower because of the complexity of the job. In fact, Sammys installed faster than Bang-It anchors and with a high level of safety.

While word continued to spread, the electrical contractor on the job was also impressed with what he saw and quickly jumped on the opportunity to use them. If there’s a need to hang threaded rod, Sammys will always come through, often solving unique problems and getting the project done in a much timelier manner.

### Trusted Partner

Contractors of all types rely on Sammy X-Press threaded rod suspension systems to save significant time and effort while experiencing excellent outcomes on the job .
